The items to be shot are decided and only the related construction items are shot. There is no mistake of neglecting shooting them. You can get instructions from person in charge of construction through the pictures. The person in charge of construction can comprehend the progress at the field.

You can comprehend the situation at the field in real time. You can supervise the builder's office on the correction while checking the pictures. If you send a picture, it will be automatically attached to the report. So, you can cut out the need of creation of report and submit it quickly.

You can check construction status and shooting point finally and supervise the branch on correction as occasion demands.

### Field merit

- ① It is possible to prevent neglecting of shooting by using camera application on which only necessary items are mounted for each property.
- ② As a person in charge of construction can check the sent pictures in real time, reshooting can be supported immediately.
- ③ As pictures can be shot while checking samples of items to be shot, you do not mistake the shooting.

### Branch merit

- ① As you can check the shot pictures in real time, you can comprehend the progress of construction.
- ② As a shot picture is attached to the report, the report can be created by just printing it.
- ③ As only pictures accepted by a person in charge of construction is created as a report, the quality of report will be also improved.
- ④ You can comprehend the actual performance of pictures in the report of property you have charge at one view.
- ⑤ You can supervise the builder's office on the correction of construction situation and shooting point.

### Head Quarters merit

- ① As you can check the report on WEB in real time, you can comprehend the progress.
- ② You can tally the report ranking data quickly based on submission rate and construction manual.
- ③ You can finally supervise the branch on correction of construction status and shooting point etc. through the report.
